

Does the new geopolitical landscape call into question the transition theme?

Anthony Bailly
 Head of European Equity

Launched five years ago with a focus on the transition theme, R-co 4Change Net Zero Equity Euro has upheld its ESG commitments while delivering a performance that stands out among other ‘climate’ funds. While its positioning has so far proven successful, should we now fear a slowdown ?

Ludivine de Quincerot
 Head of Sustainable Investment et
 Diversified Europe

With Trump’s return, is the climate transition theme at risk?

Beyond declarations of intent, we will judge by the facts. Donald Trump’s return to the White House inevitably raises concerns about US climate policy. Among these, his slogan “drill, baby, drill!” in support of oil and gas producers primarily aims to secure a competitive advantage for the United States through cheap energy. However, the productivity levels of these new drills remain to be seen, as they could lead to a drop in prices in an already well-supplied market. Moreover, we are not convinced that industry players and their investors would welcome a sharp decline in oil prices.

Additionally, during Biden’s term, investments supporting the development of renewable energy under the IRA have largely benefited Republican states. These investments are unlikely to be revoked. Only offshore wind energy has suffered a setback with the

suspension of new permit issuance. Contrary to common belief, Donald Trump's first term saw a CO₂ emissions record comparable to that of his predecessors, even excluding the pandemic period. Low-carbon technologies are currently among the most dynamic and promising sectors for the coming years. Finally, we find it unlikely that the United States would choose to completely withdraw from a booming sector where China is already the global leader.

What about the rest of the world?

China, precisely, faces an energy independence challenge and is heavily investing in renewable energy to address it. Europe, on the other hand, struggles with energy affordability, as gas prices are four times higher than in the United States. For reasons of sovereignty and competitiveness, it is essential to continue the development of green energy. This is, in fact, one of the few areas where Europe leads the US. Currently, 76% of Europe's electricity production is 'low carbon'¹ compared to 42% in the US². The energy mix has evolved significantly, and this dynamic makes us optimistic, as companies are maintaining this course despite the difficulties in implementing European financing plans.

Furthermore, the prospect of a resolution to the Russia-Ukraine conflict, an ambition repeatedly stated by Donald Trump, would have a significant impact on gas prices. Despite considerable progress, green energy production is still insufficient to meet all industrial and private needs. The 2022 conflict acted as a 'stress test' to prove this. The issue of energy storage also remains unresolved. The Old Continent therefore continues to depend on gas imports.

How have you distinguished yourselves among climate funds?

We have developed our investment strategy around the transition theme. We can invest across all sectors³, including the most polluting ones, by selecting only the companies with the most ambitious and credible decarbonisation trajectories. This positioning was rather contrarian when the fund was launched in late 2019. At the time, sustainable investment was often limited to favouring low-emission companies in sectors such as technology, consumer goods, solutions, or renewables.

We based our approach on the fact that, globally, five sectors (chemicals, raw materials, utilities, construction, and energy) account for 80% of CO₂ emissions in Scope 1 and 2⁴. We believe our impact will be greater by supporting companies in these sectors through their transition rather than exclusively funding already low-emission players. This approach also enables us to navigate fluctuating environments while meeting our sustainability and performance objectives, thanks to the flexibility of our investing strategy. Indeed, we are not constrained by sectoral rotations. Our approach is tested and stable, yet we remain pragmatic. We do not hesitate to invest in new players and sectors when justified on ESG and financial grounds⁵.

What results have you achieved in five years?

Over the past five years, we have exceeded most of our environmental objectives. The portfolio's carbon intensity has decreased by over 12% per year and is currently 30% lower than our benchmark index⁶. 72% of portfolio companies have had their targets validated by the SBTi, compared to 21% in 2019, and our taxonomy alignment stands at around 12% in terms of revenue and 19% in terms of capex⁷. These results have been achieved despite increasing the cumulative weight of high-emission sectors in the portfolio, which is now close to 28%, compared to 19%⁷ at the fund's launch. Meanwhile, we have generated a cumulative performance of 38% over five years⁸.

True to our philosophy, as the portfolio's carbon intensity has declined faster than anticipated, we continue to select new companies within high-emission sectors to support them in their transition. Each of these sectors is now represented in the portfolio, and we are committed to acting across the entire value chain. Finally, it is important to emphasise that every company selected within the portfolio plays a role in the transition at different levels. We have identified five main themes: highly polluting companies with a credible decarbonisation trajectory, solution providers accelerating the transition, companies contributing to financing, those influencing the energy mix evolution, and, finally, low-emission companies that can still improve.

How do you analyse this dynamic?

Transition is a long-term process that requires milestone assessments to validate the credibility of the trajectory. After these five years, we have exceeded our targets. This outcome demonstrates that we have selected companies capable of achieving, and even surpassing, their own ambitions. Since the fund's launch, very few companies in which we have invested have failed to meet their commitments. However, we are now reaching an inflection point, making it more challenging to maintain the same pace. That is why the quality of our fundamental analyses and the engagement we have with companies are key elements of our investment process.

We have developed a transition framework that allows us to go beyond declarations of intent and granularly review corporate strategies. This framework assesses management commitment, the quality and transparency of reporting, reference to scientific models or adherence to industry initiatives, the granularity of objectives, committed capex, and the track record of recent years.

This analytical work is complemented by significant engagement efforts to support companies, understand their strategies, challenge them, share best practices, and collaborate on setting relevant targets. We also engage at key moments, such as during general meetings. The companies in which we invest operate on a global scale and influence practices across their value chains. We are also convinced that they contribute to triggering a virtuous cycle. When one player demonstrates its ability to stay the course it has set, it tends to inspire its peers, creating a positive 'snowball effect.'

SRI risk indicator : 5/7

The synthetic risk indicator helps assess the risk level of this product compared to others. It indicates the probability that this product will incur losses due to market fluctuations or our inability to make payments. The risk indicator assumes that you hold the product for five years. The actual risk may be very different if you opt for an early exit, and you could receive less in return. We have classified this product as risk level 5 out of 7, which is a medium-to-high risk level and primarily reflects its positioning in the Eurozone equity market. In other words, potential losses related to the product's future performance are at a medium-to-high level, and if market conditions deteriorate, our ability to make payments could be affected. This product does not provide protection against market fluctuations or a capital guarantee, meaning you could lose some or all of your investment. Before any investment, it is essential to carefully read the PRIIPS DIC and the prospectus of the UCI, and more particularly its section on risks and fees, available on the Rothschild & Co Asset Management website: am.eu.rothschildandco.com.

This analysis is not valid unless at the time of drafting this report. R-co 4Change Net Zero Equity Euro is a sub fund of the French Variable Capital Investment Company 'R-co 2,' whose registered office is 29, avenue de Messine, -75008 Paris, registered 889,511,747 RCS PARIS. The information does not presume the suitability of the presented UCIs for the profile and experience of each individual investor. Rothschild & Co Asset Management will not be held liable for any decision taken on the basis of the information contained in or inspired by this document. In case of doubt, and before any decision to invest, we recommend that you contact your financial or tax advisor. The Undertaking for Collective Investment (UCI) presented above is organised according to French law and regulated by the French financial markets authority (AMF). Investment in units or shares of any UCI is not risk free. Before any investment, it is imperative to read the DIC and prospectus of the UCI carefully, and more particularly its section relating to risks. Each investor must also ensure the jurisdictions in which the units or shares of the UCI are registered. The PRIIPS DIC/full prospectus is available on our website: www.am.eu.rothschildandco.com. The net asset value (NAV)/net inventory value (NIV) is available on our website. The figures quoted relate to past years. Past performance is not a reliable indicator of future performance and is not constant over time. The value of the investments and the income derived therefrom may vary up or down and is not guaranteed. It is therefore possible that you will not recover the amount originally invested. Variations in exchange rates may increase or decrease the value of the investments and the income derived therefrom, if the reference currency of the UCI is different from the currency of your country of residence. UCIs whose investment policy especially targets specialised markets or sectors (such as emerging markets) are generally more volatile than more general and diversified allocation funds. For a volatile UCI, the fluctuations can be particularly significant, and the value of the investment may therefore drop sharply and significantly. The presented performance figures do not take into account any fees and commissions collected during the subscription and redemption of the units or shares of the UCI concerned. The presented portfolios, products or securities are subject to market fluctuations, and no guarantee can be given as to their future performance. The tax treatment depends on the individual situation of each investor and may be subject to changes. The presented information is not intended to be disseminated and does not in any case constitute an invitation for US persons or their agents. The units or shares of the UCI presented in this document are not and will not be registered in the United States pursuant to the US Securities Act of 1933 as amended ('Securities Act 1933') or admitted under any law of the United States. These shares or units therefore must not be offered or sold in or transferred to the United States (including US territories and possessions) nor directly or indirectly benefit any 'US Person' (as understood under Regulation S of the 1933 Securities Act) or any equivalent person, as defined in the HIRE Act of 18/03/2010 and the Foreign Account Tax Compliance Act (FATCA). Although Rothschild & Co Asset Management information providers, including without limitation, MSCI ESG Research LLC and its affiliates (the "ESG Parties"), obtain information (the "Information") from sources they consider reliable, none of the ESG Parties warrants or guarantees the originality, accuracy and/or completeness, of any data herein and expressly disclaim all express or implied warranties, including those of merchantability and fitness for a particular purpose.
